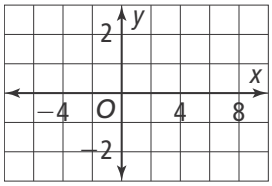
5-3 Additional Practice

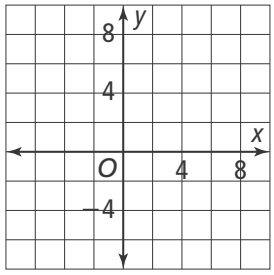
Graphing Radical Functions

Graph the following functions, then state the domain and range. Is the function increasing or decreasing?

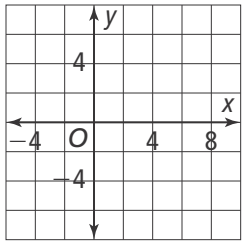
1. $f(x) = \sqrt{x - 3}$



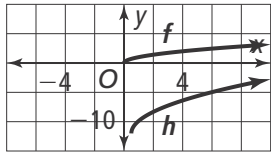
2. $f(x) = \sqrt[3]{x + 2}$



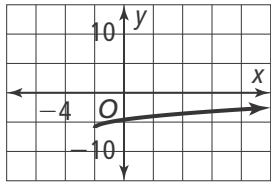
3. Graph $f(x) = \sqrt{x}$ and $g(x) = \frac{1}{3}\sqrt{x - 2} - 4$. What transformations of the graph of f produce the graph of g? What is the effect of the transformations on the domain and range of $g(x)$?



4. What transformations of the parent graph $f(x) = \sqrt{x}$ produce the graph of $h(x) = \sqrt{9x - 4.5} - 12$?



5. What radical function is represented in the graph?



6. The visibility, in miles, from a certain spot on a hillside can be calculated using the function $d = \sqrt{1.5x}$, where x is the height in feet above the valley floor. Fanon walks through elevations ranging from 9 feet to 36 feet above the valley. What are the minimum and maximum distances that she can see?

7. The surface area of a paper cup is defined by the function $S(h) = 4\pi\sqrt{16 + h^2}$, where h is the height of the cup. What are domain and range of $f(x)$?
