**Piecewise-Defined Functions** 

- A phone company offers a monthly data plan for \$10 a month. The plan includes 2 megabytes of data, and charges \$0.10 per megabytes above the 2 megabytes of data. Write a piecewise-defined function for M(x), the cost for x megabytes of data used in a month.
- 2. Graph the piecewise-defined function. State the domain and range. Identify whether the function is increasing, constant, or decreasing on each interval of the domain.

$$f(x) = \begin{cases} 2, & -4 \le x \le -2 \\ x+2, & -2 < x < 3 \\ -3x+12, & 3 \le x \le 5 \end{cases}$$

**3.** Write the rule that defines the piecewise-defined function in the graph.

**4.** Write the function *f* as a piecewise-defined function.

$$f(x) = |2x - 8|$$

**5.** A shipping service uses the weight of a package to determine its postage. The charge is \$3 for the first pound and \$2 for each additional pound up to 5 pounds. What are the domain and range of the function?

$$f(x) = \begin{cases} 3, & 0 < x \le 1 \\ 5, & 1 < x \le 2 \\ 7, & 2 < x \le 3 \\ 9, & 3 < x \le 4 \\ 11, & 4 < x \le 5 \end{cases}$$

**6.** You plan to rent a car from XYZ Car Rental Company for a flat rate of \$35 a day. If you plan to use the car for 3 days or fewer, you must also pay a \$10 insurance fee per day. If you plan to use the car for more than 3 days, there is a \$5 insurance fee per day. Write a piecewise-defined function that models this function.
